

Premium Joint Supplement™

TECHNYFLEX®

CANINE

Start your dog on a **loading dose** of double the normal dose for 14 days depending on the condition. Then gradually reduce to the normal dose, unless symptoms return. Technyflex needs to be taken daily to maintain results.

Normal Dose

| Dog Weight | Daily Dose |
|------------|-----------------------------|
| 1-10kgs | 1 capsule/scoop daily |
| 10-25kgs | 1 - 2 capsules/scoops daily |
| 25-40kgs | 2 - 3 capsules/scoops daily |
| 40+ kgs | 2 - 4 capsules/scoops daily |

Higher doses may be required for heavy breeds or severe joint disease. The dose can also be temporarily increased during cold weather or strenuous exercise to ease symptoms. Technyflex is dose related. Generally the more you give, the stronger the effect, so vary the dose until the desired effect of dog comfort is reached. Technyflex is fully registered as a Veterinary Medicine.

- Do not take if allergic to shellfish
- Safety in pregnancy has not been established
